**Purpose of Contact:** Sample Location changes for the North Firing Range SAP

### Discussion

Additional, biased sample locations will be placed along the northern edge of the north berm at approximately 40 feet spacing, corresponding to the grid spacing used at this location. Locations will be placed approximately 3 feet up from the base of the berm. A and B intervals will be collected at these locations.

Sample locations BV53-012, BV53-013, BV53-014 and BV53-015 are located about 4 feet south of the biased samples at the base of the south face of the northern berm. These samples will be converted to biased sample locations and moved onto the south face of the northern berm, about 4 feet above the base of the berm. As previously agreed, only A intervals will be collected at these locations because soil was removed from this face prior to building the shoot house.

The slab and/or contours are inaccurate as shown on the map in the current SAP. Samples will be collected as per the intent of this contact record, not as depicted on the current map. The contours and/or locations will be corrected for any future documents.
